Their need to execute large orders without causing significant price impact is a key challenge for institutional investors. This is where the concept of **Liquidity** becomes crucial. Liquidity refers to how easily and quickly an asset can be bought or sold at stable prices without causing a big change in price. A highly liquid forex market, like EUR/USD, has abundant buyers and sellers and small **bid** and **ask** spreads, allowing large orders to transact with minimal price impact. Illiquid markets may have volatile price jumps and larger

spreads.<;/p>&semi
