[illegible]

is the quality and operational efficiency of the market, which is determined by the number of participants and the volume of trading. A highly liquid market has many participants and a large volume of trading, which allows for easy entry and exit from positions. Illiquid markets have fewer participants and a smaller volume of trading, which can lead to larger price movements and higher transaction costs. Liquidity is an important factor to consider when trading in the forex market, as it can affect the profitability of your trades. You can find more information about liquidity and other trading concepts on our website.

Liquidity - Refers to how easily and quickly an asset can be bought or sold at stable prices without causing a big change in price. A highly liquid forex market like EUR/USD has abundant buyers and sellers and small bid/ask spreads, allowing large orders to transact with minimal price impact. Illiquid markets may have volatile price jumps and larger spreads.

Liquidity Providers - These are the firms that provide liquidity to the market by buying and selling currencies. They are essential for the smooth functioning of the forex market. You can find more information about liquidity providers and other trading concepts on our website.

Liquidity Providers - These are the firms that provide liquidity to the market by buying and selling currencies. They are essential for the smooth functioning of the forex market. You can find more information about liquidity providers and other trading concepts on our website.

Algorithmic Trading - The use of algorithms
computer programs to execute trades automatically according to pre-set rules. In algorithmic trading, strategies are encoded as logic in software which places orders when specified market conditions arise. This removes emotional decision-making, allowing high-speed execution of strategies. Forex robots often implement algorithmic trading so that they can enter and exit positions based on data-driven criteria.

content"semi;>semi;<semi;p>semi;Scalability - Scalability is the ability to
easily increase (or decrease) server resources according to demand. In
cloud/VPS hosting, you can scale your CPU, RAM and storage up or
down on the fly. For automated trading, scalability means starting with a small
server and growing it as your strategy expands or requires more performance. It also
means you only pay for additional power when you need it. The cloud model is
especially scalable –semi; if your trading bot suddenly needs more CPU (for
example, during backtesting or high market volatility), you can allocate
more cores or memory in minutes. This flexibility keeps costs efficient and performance
adequate.<semi;/p>&s
